*Use-Case Name*:   2.2 Reject Request

Description: If the request for additional event from the student doesn't have complete details or is a hoax, the administrator rejects the request by notifying the student through the application. This is done manually through the database.

Preconditions: The administrator must have read the details of request from the student.

Flow of Events:

Scenario Name	Description
Scenario 1 The administrator rejects the request.	1. The administrator checks if the details of the requested event are incomplete or if the event is a hoax. 2. Reject the request by notifying the student through the application.
Scenario 2 The administrator approves a request for an additional event.	See use-case "2.1 Approve Request" in 02-Requirements Engineering folder in Github.

Activity Diagram of the Flow of Events:

Postcondition: The administrator must have notified the student through the application if the details of the requested event are not complete or if the event itself is a hoax.

Relationships: This use-case extends "2.0 Manage Requests".

Special Requirements:
 None.
